BACKGROUND

This report is being generated as part of a statewide effort among Transportation Management Area Metropolitan Planning Organizations (TMA MPO) to track common performance measures, evaluate the region's transportation system against its transportation goals and standards, and contribute to the Statewide Transportation Plan. The Roanoke Valley Transportation Planning Organization (RVTPO), as a TMA MPO, is required by the state to track regional performance measures. The RVTPO will be eligible for funding through sources only available to TMA MPOs and receipt of those funds is contingent upon the TPO's development, and the Commonwealth Transportation Board's approval, of the regional performance measures.

Regional performance measures fall under the following categories:

- Congestion Reduction
- Safety
- Bicycle and Pedestrian Facility Usage
- Transit Usage
- HOV Usage
- Jobs-to-Housing Ratio
- Job and Housing Access to Pedestrian Facilities
- Air Quality
- Movement of Freight

Due to the lack of data for the southwest portion of the state, not all performance measures requested by the State are applicable to the Roanoke area particularly in the categories of congestion reduction and air quality. Such performance measures may be added in the future if data becomes available. A master list of all performance measures tracked by RVAMPO is included on the following page.

It should be noted that, in addition to data collection for all of the cities of Roanoke, Salem and the Town of Vinton, data is also collected for the localities which are only partially in the MPO area. Those localities are: Bedford, Botetourt, Montgomery and Roanoke Counties. For these localities, data was reported for the entire area and not just the portion falling in the MPO Study Area. The rationale is that because there is no clear way to isolate and capture data from these partial areas, it is more prudent to include the entire locality, then to completely omit it.

Notes explaining specific downward trends and trend comparison irregularities:

- ① 2.1: Fatality Rate per 100 Million Vehicle Miles Traveled – At the publication of this report, the Daily Vehicle Miles Traveled report had not been released by VDOT;
- ② 2.2: Crash Rate per 100 Million Vehicle Miles Traveled – At the publication of this report, the Daily Vehicle Miles Traveled report had not been released by VDOT
- ③ 3.1: Number of Bicyclists by Location and 3.2: Number of Pedestrians by Location – There was no data gathered in 2014 due to inclement weather;
- ④ 3.3: Number of Greenway Users by Location – For comparison purposes, only greenway counters with previous year's counts were used. Data was also excluded from counters which are no longer operational. The chart below represents new counters with data collection beginning in 2014. Those counters will be included in next year's report;
- ⑤ 4.7: Annual SmartWay Connector Bus Ridership – At the publication of this report, the ridership numbers were not available;
- ⑥ 10.1: Truck and Rail Mode Share, by value – It is expected that VDOT will purchase updated freight data sets in FY16. It is anticipated that this data will be available for inclusion in the 2016 Performance Measures Report.
- ⑦ 10.2: Truck and Rail Mode Share, by tons – It is expected that VDOT will purchase updated freight data sets in FY16. It is anticipated that this data will be available for inclusion in the 2016 Performance Measures Report.

The trends in the following performance measures are of significant note:

2.1: Number of Highway Fatalities and 2.2: Number of Highway Crashes – There was a 22% and 28% reduction, respectively, for highway fatalities and crashes from 2013 to 2014.

2.4: Annual Transit Injuries – There was a significant decrease of transit injuries (8 or 62%) from 2013 to 2014.
